DETAILED ACTION

Claims 1-37 are pending.

Election/Restrictions

1. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

2. Claimed invention is drawn to hydroxamic acid compounds of formula (I) and the treatment of hyper-proliferative disorders.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election. A single species must include each substituent for example R3, n, R1, L, W, specific bonds between carbonyl and R3 in side chain of hydroxamic chain, and (R2) m. Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by

Art Unit: 1612

37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The following claim(s) are generic: claims 1-37.

3. The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features. The substituents in claim X contain large number of substituent. In addition the substituents R include another set of substituents. Overall the compounds of formula (I) includes thousands of compounds which do not relate to a single inventive step because there is no core structure.
